COMPLETED EXAMPLE – WORKSHEET 7.2: MATCHING CHANNELS TO THE PRIMARY AND INFLUENCING AUDIENCES

Purpose: This worksheet includes a list of questions to support the selection of an appropriate channel mix to communicate with the intended audiences about the emergency issue being addressed.

Directions: State who the intended audience is for this exercise and whether they are a primary or influencing audience.

Complete one sheet for each audience segment you have identified. Worksheet 4.1 in Unit 4: Audience Segmentation can help you identify audiences if you have not done so yet.

Answer the questions asked about the audience. Use evidence-based data from sources such as media consumption studies, project reports, surveys, qualitative studies and government statistics.

Finally, summarize the key points as this will help you identify the most appropriate communication channels for each audience.

Please note that this worksheet is followed by a completed example that you can use as reference if necessary.

Audience: Caretakers of children under 5 ☐ Priority ☐ Influencing

1. What channels does the audience use regularly for different communication needs? For example, radios and TV for receiving or accessing news or health information, mobile phones for communicating with others, etc.

Mothers in rural areas mostly receive information by word-of-mouth, mainly by talking to their friends, their local leaders and traditional practitioners. In rural areas, the men tend to control access to the radio.

In urban areas women listen to the radio, especially the Jamina soap opera that touches upon numerous health issues. They also watch television when health programs are broadcast.

In both rural and urban areas, women have access to mobile phones.

2. What communication channels does the audience generally prefer?

Rural women like human contact (door-to-door, small group discussions, face-to-face conversations). They also like radio but access is controlled by their husbands. Urban women prefer the radio.

3. Which channels does the audience consider credible and for what kinds of information? Consider both modern and traditional communication channels such as community leaders and influential members or society.
COMPLETED EXAMPLE – WORKSHEET 7.2: MATCHING CHANNELS TO THE PRIMARY AND INFLUENCING AUDIENCES (Continued)

Urban women access health centers and their CHWs for health related information. Printed information is very popular among urban women who expect receiving leaflets from health providers.

Rural women prefer talking to the traditional practitioner and asking their local leaders and elderly women. Generally rural women do not seek information from CHWs but they respect their advice when they come on home visits.

4. What is the audience’s literacy level? If possible, specify whether there is a different between rural and urban populations.

Among rural women literacy levels are low (42 percent). In urban areas literacy levels among women are higher at 81 percent.

5. What differences exist, if any, in access to communication channels between genders?

Not relevant as this audience group is women only.

6. Which channels does the audience prefer for getting information about emergencies?

In rural areas women prefer going to their local and religious leaders.

In urban areas a rise in women seeking information from CHWs and health facilities has increased.

7. Whom does the audience trust and turn to for advice about health or about other topics similar to that causing the emergency? If known, highlight differences between rural and urban areas and between genders.

In rural areas women are showing trust in their local leaders and traditional practitioners.

In urban areas women show trust in the medical establishment and television because they say the visual component on television helps them understand and believe.

8. During the emergency, how does the audience spend a typical day? Where do they go and what communication opportunities exist throughout the day? Consider that during an emergency standard routines may be disrupted.

Morning prayers, work and/or child care, market, cattle post and traveling for water.

</table>
COMPLETED EXAMPLE – WORKSHEET 7.2: MATCHING CHANNELS TO THE PRIMARY AND INFLUENCING AUDIENCES (Continued)

Summarize the information obtained from this worksheet in the table below. This will highlight the principal channels for communicating with each audience segment.

<table>
<thead>
<tr>
<th>Audience:</th>
<th>Caregivers of Children under 5 in urban and rural areas</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. <strong>Communication Channel Preferences</strong></td>
<td>Urban women prefer radio, television and printed information. Rural women prefer face-to-face communication</td>
</tr>
</tbody>
</table>
| 2. **Trusted Information Sources** | For urban women, television, radio and health facilities are trusted sources of information on health matters.  
For rural women, local leaders, elderly women and traditional practitioners are the most trusted sources of information on matters relating to health |
| 3. **Literacy Level** | Low among rural women (only 42% of women are literate)  
Higher among urban women (81% of women are literate) |
| 4. **Possible Communication Channels** | For rural women, sensitization session run by elderly women and leaders in strategic locations; information disseminated during religious sermons; door-to-door visits; radio spots at strategic times when women are likely to have access to the radio (as access is mostly controlled by men)  
For urban women, televisions spots portraying visual explanations about how cholera is spread and symptoms; information leaflets at health facility level; using the Jamina radio soap opera to introduce information about cholera.  
SMS is accessible to both rural and urban women as phone ownership is high across the country.  
Billboards can reach both rural and urban women especially if placed strategically on routes that are highly frequented by the audience. |
